The invention relates to the use of linear peptides, coupled to an active condition relates to the use of linear peptides, coupled to an active for diagnosis or treatment of disorders localised in the central nervous for diagnosis or treatment of disorders localised in the central nervous conditions of the same of the containing as the community, where: each of X1-X16 conditions and in the central nervous conditions (a) (a) (c) BXXBXXXBXXBXXBXBXBX, where: each of X1-X16 conditions (a) (a) (c) Containing a side chain that includes a basic group; be TTP; each B is an aliphatic or aromatic aa. The linear peptide may be containing at least 7 consecutive as fragment retro forms of (a)-(c) containing D- and/or L-form aa, or a fragment containing at least 5, preferably at least 7 consecutive as fragment correct forms of (a)-(c) containing D- and/or L-form aa, or a fragment correct forms of the see several families have cytolytic tachyplesins, transportan, etc. Of these several families have cytolytic tachyplesins, transportan, etc. Of these several families have cytolytic effects and are termed peptide antibiotics. They fall into 3 main effects and maganins; (ii) peptides with alpha-helices, categories based on their structure: (i) peptides with alpha-helices, beta-sheets, e.g. protegrin, tachyplesins, denote to the presence of with no major structure but containing bends due to the presence of with no major structure but containing bends due to the presence of corresponds on the Antennapedia family peptides; (b)-peptides are based on are based on tachyplesins. This sequence of protegrins; and (c)-peptides are based on tachyplesins; and (c)-peptides are based on tachyplesins. This sequence correctors are apprided and peptide designed on peptides are based on are based on tachyplesins. This sequence correctors are pased on the Antennapedia family peptides; (b)-peptides are based on tachyplesins, and (c)-peptides are based on tachyplesins and the active agent are particularly conditions of the linear peptide major such 
analgesic; antimicrobial;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Linear; protegrin; peptide antibiotic; beta-sheet; secondary structure; disulphide bridge; antibody; ribozyme; antitumour agent; antiviral; anti-inflammatory; mammal; cell membrane; passive transport; cytoplasm; nucleus; blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the P-glycoprotein pump, are avoided. Also, peptides are assily produced by chemical synthesis, can be coupled easily to the agent, cross mammallan cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells

This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The novel derivatives are linear and lack the disulphide bridge. The novel derivatives are linear and lack the gents; an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, and non-lytic but can cross mammalian cell membranes rapidly by a passive mechanism, so can deliver active agents to cytoplasm and nucleus, including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cytostatic; neurodegenerative; antidepressant; analgesic; antimicrobial;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      blood-brain barrier; diagnostic; central nervous system; protegrin; Antennespedia; tachyplesin; peptide antiblotic; Alzheimer's disease; cancer; Parkinson's disease; depression; pain; meningitis.

The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly the P-glycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (or cross mammalian cell membranes rapidly by a passive mechanism (as are used to treat cancer. The present sequence represents a petide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antimicrobial protegrin; broad spectrum; gram-positive; bacterium; gram-negative; bacteria; yeast; fungus; fungi; protozoa; virus; retrovirus; HIV; human immunodeficiency virus; preservation; disabelia; prophylaxis; treatment; infection; disease; conjunctivitis; keratitis; corneal ulcer; stomach ulcer; STD; gram-negative sepsis; endocarditis; preumonia; biopidal; blostatic; gram-negative sepsis; endocarditis; preumonia; biopidal; blostatic; respiratory infection; urinary tract infection; MRSA; protozoan; vancomycin resistant Enterococcus; pathogen; multi-drug resistance; penicillin resistant Streptococcus pneumoniae; pig; porcine; methicillin resistant Straphylococcus aureus; systemic candidlasis.

                                                                                                                                                                                                                                                                                                                        The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, including gram-positive and gram-negative bacteria, yeast, fungi, protozoa and certain strains of viruses and retroviruses, e.g. HIV.

It can be used to preserve or disinfect a variety of materials, including medicament, foodstuffs, cosmetics, contact lens solutions, medicament, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, corneal ulores, stomach ulorers associated with Helicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis.

It is biostatic or biocidal against clinically relevant pathogens exhibiting multi-drug resistance, e.g. vancomycin resistant Streptococcus pneumoniae and methicillin resistant Staphylococcus cureus (MRSA). It is a dosage of 0.1 to 5, preferably 0.5 to 1 mg/kg/day, by injection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, including gram-positive and gram-negative bacteria, yeast, fungi, protocoa and certain strains of wiruses and retroviruses, e.g. HIV.

Trong to be used to preserve or disinfect a variety of materials, including medical equipment, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, corneal ulcers, stomach ulcers associated with Helicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis. It is biostatic or biocidal against clinically relevant pathogens exhibiting multi-drug resistance, e.g. vancomycin resistant Steptococcus pneumoniae and methicillin resistant Steptococcus survens (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5 aureus (MRSA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

It can be used to preserve or disinfect a variety of materials, it can be used to preserve or disinfect a variety of materials. It can be used for the prophlaxis or treatment of microbial can also be used for the prophlaxis or treatment of microbial can also be used for the prophlaxis or treatment of microbial can also be used for the prophlaxis or treatment of microbial can infections or diseases in plants and animals, e.g. conjunctivitis, corneal ulcers, stomach ulcers associated with Helicobacter pylori, sexually transmitted diseases, gram-negative capsis, endocarditis, pneumonia and other respiratory infections, crimary tract infections, systemic candidiasis and oral mucositis. It is blostatic or biocidal against clinically relevant pathogens captivity infections or faccines, penicillin resistant staphylococcus streptococcus pneumoniae and methicillin resistant staphylococcus captures (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5 to 1 mg/Kg/day, by injection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
Helicobacter pylori; sexually transmitted disease; oral mucositis; gram-negative sepsis; endocarditis; pneumonia; biocidal; biocatic; respiratory infection; urinary tract infection, MRSA; protozoan; wancomycin resistant Enterococcus; pathogen; multi-drug resistance; penicillin resistant Streptococcus pneumoniae; pig; porcine; methicillin resistant Staphylococcus aureus; systemic candidiasis.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 7
A60234
IgA FC receptor precursor - Streptococcus agalactiae (strain SB35)
N;Alternate names: IgA-binding protein; protein Bac
N;Contains: beta antigen
C;Species: Streptococcus agalactiae
C;Species: Streptococci: Sequen
C;Species: Streptococci: Streptococci: Sequen
C;Species: Streptococci: Streamonts
C;Species: Streptococcus agalactiae agalactiae of an IgA receptor from group B streptococci: Streamonts
C;Species: Streptococcus agalactic and Streptococci: Streamonts
C;Species: Streptococci: Streamonts

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Retief JD., Krajewski C., Westerman M., Winkfein R.J., Dixon G.H.;
"Molecular phylogeny and evolution of marsupial protamine P1 genes.";
"Molecular phylogeny and evolution of marsupial protamine P1 genes.";
Proc. R. Soc. Lond., B, Biol. Sci. 25:7-14(1995).
-!- FUNCTION: PROTAMINES SUBSTITUTES POR HISTONES IN THE CHROMATIN OF
SPERM DURING THE HAPLOID PHASE OF SPERMATOGENESIS. THEY COMPACT
SPERM DNA INTO A HIGHLY CONDENSED, STABLE AND INACTIVE COMPLEX.
-!- SUBCELLULAR LOCATION: NUCLEAR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chromosomal protein; Nucleosome core; Spermatogenesis; DNA-binding; Testis; DNA condensation; Nuclear protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Retief J.D., Krajewski C., Westerman M., Winkfein R.J., Dixon G.H.;
"Molecular phylogeny and evolution of marsupial protamine Pl genes.";
Proc. R. Soc. Lond., Biol. Sci. 259.7-14(1995).
-1- FUNCTION: PROTAMINES SUBSTITUTES FOR HISTONES IN THE CHROMATIN OF
SPERM DURING THE HAPLOID PHASE OF SPERMATOGENESIS. THEY COMPACT
SPERM DIA INTO A HIGHLY CONDENSED, STABLE AND INACTIVE COMPLEX.
-1- SUBCELLULAR LOCATION: TESTIS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

-i. FUNCTION: PROTAMINES SUBSTITUTES FOR HISTONES IN THE CHROMATIN OF SPERM DIXING THE HAPLOID PHASE OF SPERMATOGENESIS. THEY COMPACT SPERM DNA INTO A HIGHLY CONDENSED, STABLE AND INACTIVE COMPLEX.

-i. SUBCELLULAR LOCATION: NUCLEAR.

corrections and are termed peptide antibiotics. They fall into the presence of the protection and are among and are among as a containing a side chain that includes a basic group; be Trp; each B is as containing a side chain that includes a basic group; and each X is an aliphatic or aromatic as. The linear peptide may be and each X is an aliphatic or aromatic as. The linear peptide may be containing at least 5, preferably at least 7 consecutive as from (a)-(c). peptides able to cross the BBB include protegrins, Antennapedia, peptides able to cross the BBB include protegrins, Antennapedia, categories based on their structure; (i) peptides with alpha-helices, categories based on their structure; (i) peptides with alpha-helices, categories based on their structure; (i) peptides with alpha-helices, beta-sheets, e.g. protegrin, tachyplesins, defensins; (ii) peptides of the presence of with no major structure but containing bends due to the presence of with no major structure but containing bends due to the presence of with no major structure but containing bends due to the presence of with no major structure but containing bends due to the presence of with no major structure but containing bends due to the presence of call into the peptide antibiotic categories defined above: (a)-peptides of the invention are based on the Antennapedia family peptides; (b)-peptides able to cross the BBB and is conjugated to a doxorubicin molecule by a succinate the BBB and is conjugated to a doxorubicin molecule by a succinate the peptide linker. The peptide may also be linked to a benzylpenicillin molecule or chingates of the linear peptides and the artive agent are particularly contains and the ninear neutrines and the ninear neutrines and the neutr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cytostatic; neurodegenerative; antidepressant; analgesic; antimicrobial; blood-brain barrier; diagnostic; central nervous system; protegrin; Antennapedia; tachyplesin; peptide antibiotic; Alzheimer's disease; cancer; Parkinson's disease; depression; pain; meningitis; dalargin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the use of linear peptides, coupled to an active agent, to prepare a composition able the cross the blood-brain barrier for diagnosis or treatment of disorders localised in the central nervous system. The linear peptide preferably has the formula: (a) X1- X16;
                                                                      This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the adisulphide bridge. The novel derivatives are used to deliver active agents to an organism. e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonuclectides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cytostatic; neurodegenerative; antidepressant; analgesic; antimicrobial; blood-brain barrier; diagnostic; central nervous system; protegrin; Antennapedia; tachyplesin; peptide antibiotic; Alzheimer's disease; cancer; Parkinson's disease; depression; pain; meningitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of linear peptides as vectors for active ingredients, useful for diagnosis and treatment of central nervous system diseases, can transport agents passively across the blood-brain barrier

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   qq
                                                                                                                                            The invention literates to the use of ithera prepious, couptrue to an active agent, to prepare a composition able the cross the blood-brain barrier for diagnosis or treatment of disorders localised in the central nervous system. The linear peptide preferably has the formula: (a) X1-X16

(b); BXXBXXXXBBBXXXXXXB; or (c) BXXBXXXXBBXB, where: each of X1-X16

are amino acids (aa), of which 6-10 of them are hydrophobic and X6 must containing a side chain that includes a basic group; and each X is an aliphatic or aromatic aa. The linear peptide may be retro forms of (a)-(c) containing a side chain that includes a basic group; and each X is an aliphatic or aromatic aa. The linear peptide may be containing at least 7 consecutive aa from (a)-(c). Peptides able to cross the BBB include protegrins, Antennapedia.

Ceffects and are termed peptide antibiotics. They fall into 3 main categories based on their structure: (i) peptides with alpha-helices, e.g. cecropins and maganins; (ii) peptides with disulphide bond-linked ceffects and are termed peptide antibiotics. They fall into 3 main categories between the containing benefined above: (a) is peptides.

Ceffects and are termed peptide antibiotics. They fall into 3 main categories defined above: (a) is peptides.

Ceffects and are termed peptide antibiotics with disulphide bond-linked categories defined above: (a) is peptides.

Ceffects and are termed antibiotic categories defined above: (a) is peptides.

Ceffects and are termed and profiles; (b) peptides are based on the Antennapedia family peptides; (b) peptides are based on the Antennapedia family peptides.

Ceffects and are peptide antibiotic categories defined above: (a) peptides.

Ceffects and are peptide designed on peptides are based on the Antennapedia family peptides.

Ceffects and are peptide designed on peptides are based on represents a synthetic linear peptide designed on peptides are based on the Antennapedia family peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics for the peptide antibiotisc family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antibody; ribozyme; antitumour agent; antiviral; mammal; cell membrane; passive transport; cytoplasm;
                                                                                                                                                                                                                                                            The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, methanisms the P-glycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-tytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                          New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         - nsed

ó
disulphide bridge. The novel derivatives are used to deliver active agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonuclectides, ribozymes, antitumuz agents, and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive mechanism, so can deliver active agents to cytoplasm and nucleus, including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, marticularly produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells
                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Anticancer agent; cancer cell; resistance; P-glycoprotein pump;

The present sequence is a specifically claimed example of a peptide, creembinantly produced, corresponding to the generic formula:

recombinantly produced, corresponding to the generic formula:

A1-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

where A1 = a basic amino acid; A5, A7 and A14 = a hydrophobic amino acid;
A9, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; and a 18 may be absent or a basic, hydrophobic or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid. This has a charge of a neutral/polar, hydrophobic or small amino acid. This has a charge of contral/polar, hydrophobic or small amino acid. This has a charge of a neutral/polar, hydrophobic or small amino acid. This has a charge of costeine bridge. This pectide is in snake form where all the cysteine bridge. This pectide is in snake form where all the cysteine prodegrins and are useful as anti-bacterial, anti-viral and designated protegrins and are useful as anti-bacterial, anti-viral and anti-fungal agents in plants and antimals. The protegrins of this formula are resistance to microbial or viral infection in plants by preventing the creative bacteria. The protegrins are particularly useful for the negative bacteria. The protegrins are particularly useful for the candida albicans, HIV-1, Chlamydia trachomatis, Treponema pallidum and candida albicans, HIV-1, Chlamydia be used in eye care solutions and as preservatives for food. The protegrins are more effective under a preservatives for food. The protegrins are more effective under a preservatives for food. The protegrins are more effective under a patiblotics and are non-toxic to the cells of serum) than certain
                                                                                                                                                                   Antibacterial; antiviral; antifungal; antibiotic; endotoxin; Candida albicans; gram-negative bacteria; STD; sexually transmitted disease; HIV-1; Chlamydia trachomatis; Treponema pallidum; Neisseria gonorrhoeae; eye care; preservative;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cationic, antimicrobial, virus-neutralising protegrin peptide(s) useful for the treatment of microbial infection, as food
                                                                                                                           Cationic, antimicrobial, virus-neutralising protegrin PC-57
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         preservatives and in eye care solutions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Lehrer RI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              쉽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the invention, and comprises 10-30 amino and interioral peptide (1) or the invention, and comprises 10-30 amino acid residues based on a naturally-occurring protegrin peptide. The antimicrobial peptide is useful in environmental composition for application to plants or plant environments, for inhibiting the growth of microbes. The peptide is useful for treating or preventing microbial infections, e.g. caused by staphylococcus aureus, seudomonas, Helicobacter pylori or an antibiotic resistant bacterium, or related diseases. The peptide can be used to inactivate the endotoxin of Gram negative bacteria. The peptides can be used in disinfectant compositions, and as preservatives for materials such as foodstuffs, cosmetics, medicaments or other materials containing nutrients for organisms. The peptides exhibit decreased hemolytic activity against human red blood cells as compared with native pG-1 and melittin. They have improved serum compatibility and therefore improved use as systemic antibiotics. At the same time the peptides provide broad spectrum activity with a low frequency of resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The peptides exhibit decreased haemolytic activity against human red blood cells as compared with native PG-1 and melittin. They have improved serum compatibility and therefore improved use as systemic antibiotics. At the same time the peptides provide broad spectrum activity with a low frequency of resistance.
                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents an example of an antimicrobial peptide (I) of the invention, and comprises 10.30 amino acid residues based on a naturally-occurring protegrin peptide. The antimicrobial peptide is useful in environmental composition for application to plant environments, for inhibiting the growth of microbes. The peptide is useful for treating or preventing microbial infections, e.g. caused by staphylococcus aureus, Pseudomonas, Helicobacter pylori or an antibiotic-resistant bacterium, or related diseases. The peptide can be used to inactivate the endotoxin of Gram-negative bacteria. The peptides can be used in disinfectant compositions, and as preservatives for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Harwig SSL,
                                                                                                                                                                                                                                                                                                                                                    28-NOV-1996
The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, including gram-positive and gram-negative bacteria, yeast, fungi, protozoa and certain strains of viruses and retroviruses, e.g. HIV. It can be used to preserve or disinfect a variety of materials, including medical equipment, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, corneal ulcers, stomach ulcers associated with Helicobacter pylori, sexually transmitted diseases, gram-negative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis. It is biostatic or biocidal against clinically relevant pathogens exhibiting multi-farug resistance, e.g. vancomycin resistant Enterococcus faacium or faecalis, penicillin resistant Streptococcus pneumoniae and methicillin resistant Staphylococcus aureus (MSGA). It is given at a dosage of 0.1 to 5, preferably 0.5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antimicrobial protegrin peptide(s) - having activity against bacteria, yeast, fungi, protozoa and certain strains of viruses (e.g. HIV)

```

```
The present sequence is a specifically claimed example of a peptide, recombinantly produced, corresponding to the generic formula:

recombinantly produced, corresponding to the generic formula:

Al-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-Ch17-A18)

A1-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-Ch17-A18)

Calcid and A16 — a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; acid or prolline; A17 may be absent or a basic, neutral/polar, prophobic or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid; This has a charge of a neutral/polar, hydrophobic or small amino acid; This has a charge of a cesterified forms, all of which may contain a disulphide bond to give a esterified forms, all of which may contain a disulphide bond to give a cesterified forms, all of which may contain a disulphide bond to give a cesterified forms, all of which may contain a disulphide bond to give a cesterified forms. The protegrins confer resistance to microbial or plants and animals. The protegrins confer resistance to microbial or viral infection in plants by preventing the growth of a virus or microbe are particularly useful for the treatment of sexually transmitted are particularly useful for the treatment of sexually transmitted are particularly repondents pallidum and Neisserial gonorrhoese. They can also the condition and Neisserial gonorrhoese. They can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   be used in eye care solutions and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.

and inactivate the endotoxin of gram-negative bacteria. The protegrins are particularly useful for the treatment of sexually transmitted disease caused by microorganisms e.g. candida albicans, HIV-1, Chlamydia trachomatis, Treponema pallidum and Neisseria gonorrhoeae. They can also be used in eye care solutions and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                recombinantly produced, corresponding to the generic formula:

Al-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

Al-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

An ere A1 = a basic amino acid; A5 and A3 = a small amino acid; A4 = a basic cr small amino acid; A6, A7 and A14 = a hydrophobic amino acid; A10 and A16 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; A14s has a charge of at least +3 and its N-terminal acylated and/or C-terminal amidated or esterilied forms, all of which may contain a disulphide bond to give a cysteine bridge. This peptide is in snake form where all the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is a specifically claimed example of a peptide,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a specifically claimed example of a peptide, recombinantly produced, corresponding to the generic formula: A1-A2-A3-A4-A5-Cyg-A7-Cyg-A9-A10-A11-A12-Cyg-A14-Cyg-A16-(A17-A18) where A1 = a basic amino acid; A2 and A3 = a small amino acid; A4 = a hydrophobic amino acid; A9, A12 and A16 = a hydrophobic amino acid; A9, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid or proline; A17 may be absent or a basic, neutral/polar,
cystine residues are replaced by a hydrophobic, small or large polar amino acid (e.g. alanine in this case). Peptides of this formula are designated protegrins and are useful as anti-bacterial, anti-viral and anti-fungal agents in plants and animals. The protegrins confer resistance to microbial or viral infection in plants by preventing the growth of a virus or microbe and inactivate the endotroxin of gramegative bacteria. The protegrins are particularly useful for the treatment of sexually transmitted disease caused by microorganisms e.g. Candida albicans, HIV-1, Chlamydia trachomatis, Treponema pallidum and Neisseria gonorrhoeae. They can also be used in eye care solutions and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.

hydrophobic or small amino acid; and Al8 may be absent or a basic, neutral/polar, hydrophobic or small amino acid. This has a charge of at least +3 and its N-terminal acylated and/or C-terminal amidated or esterified forms, all of which may contain a disulphide bond to give a cysterine bridge. This peptide is in snake form where all the cystine residues are replaced by a hydrophobic, small or large polar amino acid (e.g. alanine in this case). Peptides of this formula are designated protegrins and are useful as anti-bacterial, anti-viral and anti-fungal agents in plants and an anti-bacterial, anti-viral and resistance to microbial or viral infection in plants by preventing the growth of a virus or microbe and inactivate the endotoxin of gram-
                                                                                                                                                                               negative bacteria. The protegrins are particularly useful for the treatment of sexually transmitted disease caused by microorganisms e.g. Candida albicans, HIV-1, Chlamydia trachomatis, Trepronem pallidum and Neisseria gonorrhoeae. They can also be used in eye care solutions and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.
                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antibacterial; antiviral; antifungal; antibiotic; endotoxin; Candida albicans; gram-negative bacteria; STD; sexually transmitted disease; HIV-1; Chlamydia trachomatis; Treponema pallidum; Neisseria gonorrhoeae; eye care; preservative;

The present sequence is a specifically claimed example of a peptide, recombinantly produced, corresponding to the generic formula:

CC A1-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

CM A1-A3-A4-A5-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

CC A1-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

CC A1-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

CC A1-A1-A11 amino acid; A2 and A14 = a hydrophobic amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 and an absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid; and A18 may be absent or a basic, contrary polar, hydrophobic or small amino acid; and A18 may be absent or a basic, contrary-polar, hydrophobic or small amino acid; and A18 may be absent or a basic, contrary-polar, hydrophobic or small amino acid; and A18 may be absent or a basic, contrary-polar, hydrophobic or small amino acid; and A18 may be absent or a basic, contrary-polar, hydrophobic or small amino acid; and A18 may be absent or a basic, contrary-polar, hydrophobic or small amino acid; and anidated or cysteine bridge. Peptides of this formula are designated protegrins and cysteine bridge. Peptides of this formula are designated protegrins and infection in plants by preventing the growth of a virus or microbe are particularly useful for the treatment of sexually transmitted created be used in eye care solutions and as preservatives for food. They be used in eye care solutions and as preservatives for food. The contrary contrary and are nore effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the
useful for the treatment of microbial infection, as food preservatives and in eye care solutions

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              123,
